

the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion, from 1.1 billion in 1980 to 2.3 billion in 1999. The number of people aged 15 years and over has increased by 1.1 billion, from 1.1 billion in 1980 to 2.2 billion in 1999.

There are a number of reasons why the world population is growing so rapidly. One of the main reasons is that the number of children born to each woman has increased. In 1980, the average woman in the world had 2.5 children. In 1999, the average woman in the world had 2.7 children.

Another reason why the world population is growing so rapidly is that the number of people who are surviving to old age has increased. In 1980, the average person in the world lived for 47 years. In 1999, the average person in the world lived for 52 years.

There are a number of reasons why the number of people who are surviving to old age has increased. One of the main reasons is that the number of people who are dying from infectious diseases has decreased. In 1980, there were 1.5 million deaths from infectious diseases in the world. In 1999, there were 0.8 million deaths from infectious diseases in the world.

Another reason why the number of people who are surviving to old age has increased is that the number of people who are dying from non-infectious diseases has decreased. In 1980, there were 1.5 million deaths from non-infectious diseases in the world. In 1999, there were 0.8 million deaths from non-infectious diseases in the world.

There are a number of reasons why the number of people who are dying from non-infectious diseases has decreased. One of the main reasons is that the number of people who are smoking has decreased. In 1980, there were 1.5 billion people in the world who were smoking. In 1999, there were 0.8 billion people in the world who were smoking.

Another reason why the number of people who are dying from non-infectious diseases has decreased is that the number of people who are eating a healthy diet has increased. In 1980, there were 1.5 billion people in the world who were eating a healthy diet. In 1999, there were 0.8 billion people in the world who were eating a healthy diet.

There are a number of reasons why the number of people who are eating a healthy diet has increased. One of the main reasons is that the number of people who are eating more fruits and vegetables has increased. In 1980, there were 1.5 billion people in the world who were eating more fruits and vegetables. In 1999, there were 0.8 billion people in the world who were eating more fruits and vegetables.

Another reason why the number of people who are eating a healthy diet has increased is that the number of people who are eating less fat and sugar has increased. In 1980, there were 1.5 billion people in the world who were eating less fat and sugar. In 1999, there were 0.8 billion people in the world who were eating less fat and sugar.

There are a number of reasons why the number of people who are eating less fat and sugar has increased. One of the main reasons is that the number of people who are eating more whole grains has increased. In 1980, there were 1.5 billion people in the world who were eating more whole grains. In 1999, there were 0.8 billion people in the world who were eating more whole grains.

Another reason why the number of people who are eating less fat and sugar has increased is that the number of people who are eating less meat has increased. In 1980, there were 1.5 billion people in the world who were eating less meat. In 1999, there were 0.8 billion people in the world who were eating less meat.

There are a number of reasons why the number of people who are eating less meat has increased. One of the main reasons is that the number of people who are eating more plant-based proteins has increased. In 1980, there were 1.5 billion people in the world who were eating more plant-based proteins. In 1999, there were 0.8 billion people in the world who were eating more plant-based proteins.
